COMPUTER ENGINEERING
QUEZON CITY

COURSE CODE/TITLE:	CPE 007	**SECTION:**	CPE11S4
DATE PERFORMED:	10/3/2026	**DATE SUBMITTED:**	10/3/2026
NAME:	Prince Adrian M. Mangana	**INSTRUCTOR:**	Robin Valenzuela

ACTIVITY NO. 5.2 **Structures in C++.**

1. PROCEDURE OUTPUT

What procedures did you perform?

2. ANSWERS TO SUPPLEMENTAL ACTIVITY

Answer the following:

1. **What are structures?**
   Structures (struct**)** are user-defined data types in C++ that allow us to group different types of data together under one name.
2. **What are the advantages in using structures in C++?**

- Groups related data together in one place.
- Can store different data types such as string, int, and float.
- Makes programs more organized and easier to understand.
- Makes it easier to manage and access related information.
- Useful for representing real-world objects like students, employees, products, and cars.

3. **How do you declare a structure in C++?**
   You use the struct keyword:

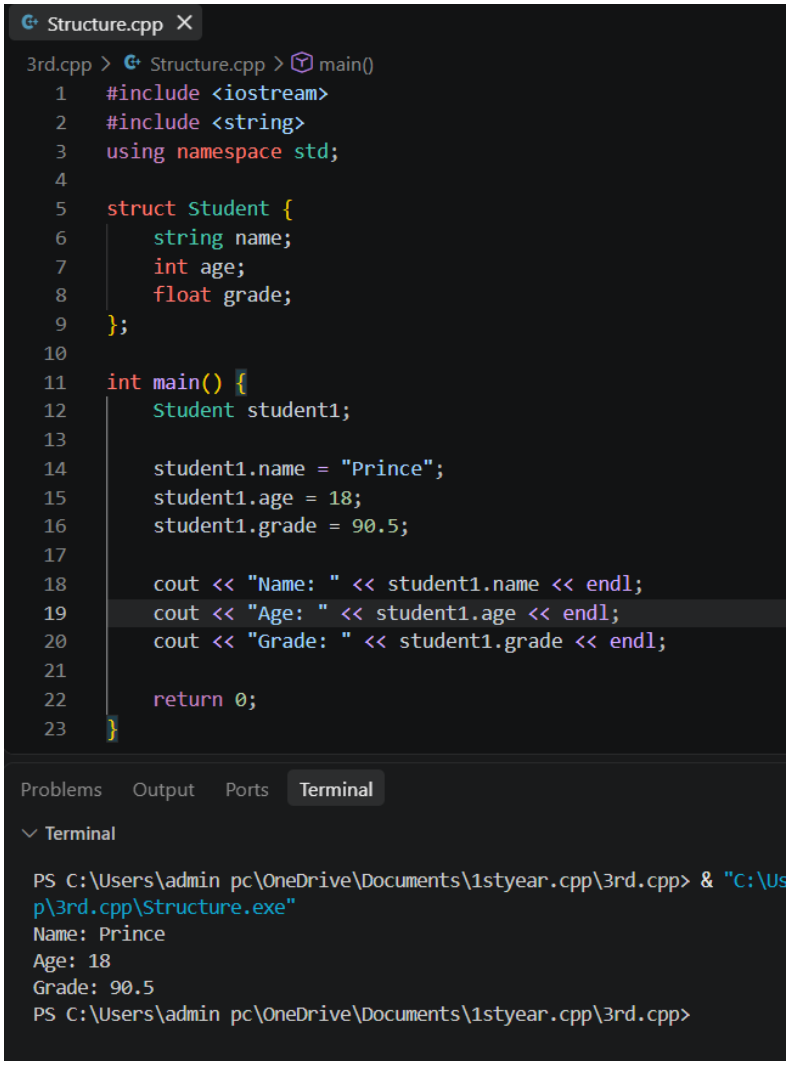

```
struct Student {
    string name;
    int age;
    float grade;
};
```

4. **How do you access members of a structure in C++?**
   You use the dot (.) operator.
   Example:

```
Student student1;

student1.name = "Prince";
student1.age = 18;
student1.grade = 90.5;
```

5. Give a simple program using structure with 3 different member elements
